

Anesthesiologist Performance (high volume providers)

Death or Major Complication

Supplemental Digital Content

Figure S1. Plot of adjusted odds ratios (AOR) with 95% confidence interval (error bar) for individual anesthesiologists in sample limited to high-volume anesthesiologists (> 132 cases).

The anesthesiologist AOR control for patient risk and hospital performance. This figure illustrates the variability of anesthesiologist performance limited to high-volume anesthesiologists (median case volume of 235).

Figure S2. Plot of adjusted odds ratios (AOR) with 95% confidence interval (error bar) for individual surgeons for sample limited to 2010. The surgeon AOR control for patient risk and hospital performance. This figure illustrates the variability of surgeon performance limited to

one year of data.
