

Supplemental Figure 9. Transgastric abdominal ultrasonography view #6. (A) Transgastric abdominal ultrasonography longitudinal view for examination of the liver. Scanning of the liver is performed from the left to the right. (B) Thrombus in the inferior vena cava (IVC) in an unstable patient after removal of a right-ventricular assist device. Note free fluid between the liver and the diaphragm. (C) Spontaneous contrast in a 55-year-old man before pericardectomy. The right atrial pressure was 20 mmHg with (D) a pulsatile portal vein Doppler velocity. (E) Dilated intrahepatic bile duct in an 83-year-old woman with previous cholecystectomy undergoing cardiac surgery.
