

Supplemental Figure 10. Inferior vena cava (IVC) stenosis. (A,B) Transgastric abdominal ultrasonographic view of the IVC long-axis view shows a dilated IVC following a Fontan procedure due to a partial occlusion at the level of the graft anastomosis to the IVC. (C,D) Hepatic venous flow (HVF) is present (C) before and is almost absent (D) after cardiopulmonary bypass (CPB) from iatrogenic occlusion. Abbreviations: AR, atrial reversal HVF velocity; D, diastolic HVF velocity; HR, heart rate; HV, hepatic vein; S, systolic HVF velocity.
