

Supplemental Figure 11. Liver transplantation and transjugular intrahepatic portocaval shunt (TIPS). Two-dimensional view of the inferior vena cava (IVC). Proximal end of a TIPS (thin arrow) protrudes into the IVC. (A) The attached thrombus (thick arrow) extends toward the cavoatrial junction. (B) Color Doppler demonstrates flow in the IVC but no Doppler signal in the TIPS. (C) In situ TIPS and protruding thrombus (arrow) in the excised liver. (With permission from Vannucci et al.⁷⁹)
