1980 Baseline (n=3,596, aged 3-18 years)

1983 Child follow-up (n=2,991)

2001 Adult follow-up (n=2,284)

2007 Adult follow-up (n=2,204)

2011 Adult follow-up for fatty liver (n=2,063, aged 34-49 years)

N=1315, data analysis

Data on childhood passive smoking, anthropometric, and clinical factors

Data on adulthood passive smoking, anthropometric, and clinical factors

Exclusion (n=748)
- Fatty liver not measured (n=21)
- Missing passive smoking data in childhood (n=176)
- Active smoking in childhood/adulthood (n=551)
