

Wheel made porcelain jar with carbon trapping shino glaze and ash glaze. Shino glaze “traps” carbon resulting from combustion into the glaze.

Wheel made porcelain bottle with shino glaze. Small indentations on the surface are from my 5 year-old son's fingers pushing into the clay while it was wet and still moldable (photograph by Kelly Mclendon).

Teabowl and teapot. Teapot assembled from separately made pieces. Surface decorated with liquefied clay freely applied and glazed with shino and temoku glaze.

Small pitcher with assorted drinking vessels. All with shino glaze.
