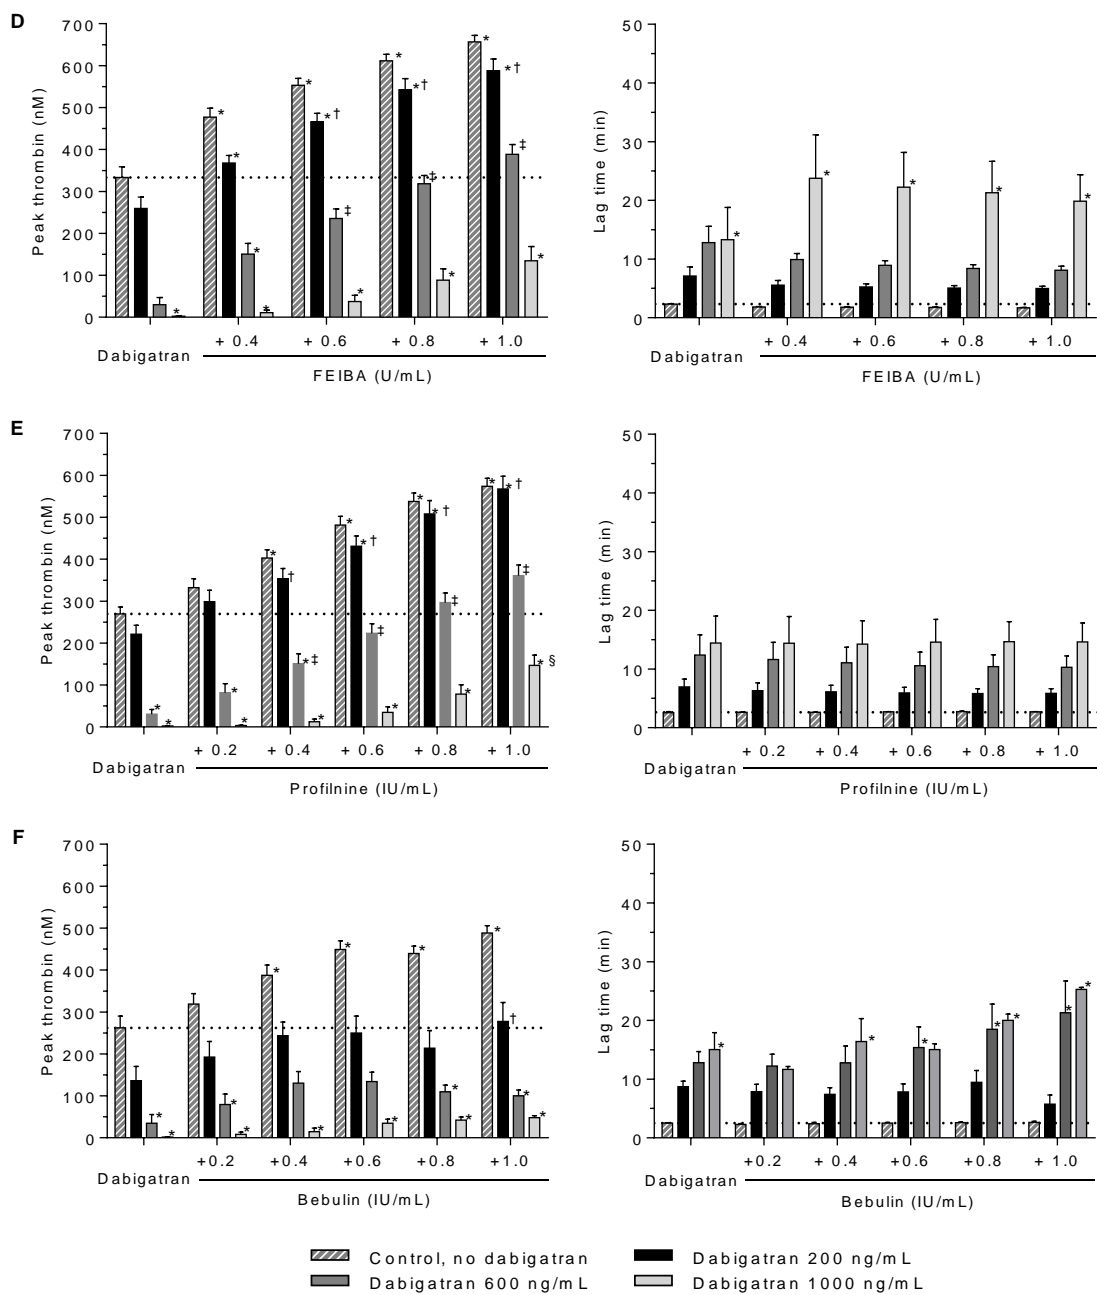

Fig. 1. The effect of increasing doses of CFC on peak thrombin generation and lag time in human platelet-poor plasma spiked with dabigatran. (A) Beriplex, (B) NovoSeven, (C), Octaplex, (D) FEIBA, (E) Profiline and (F) Bebulin. Data represent mean \pm SE ($n = 5$ per group). * $P < 0.05$ vs. control (untreated plasma), dotted line. † $P < 0.05$ vs. dabigatran 200 ng/mL, no CFC. ‡ $P < 0.05$ vs. dabigatran 600 ng/mL, no CFC. § $P < 0.05$ vs. dabigatran 1000 ng/mL, no CFC. CFC = Coagulation factor concentrate; FEIBA = Factor Eight Inhibitor Bypassing Activity.
