

Fig. S6: Kaplan-Meier plot of survival proportion from Fig. 5 B with different censor times. A: Censor at 420 min (dotted vertical line after 386 min). **B:** Censor artificially set to 386 min (dotted vertical line). Survival proportions are shown as Kaplan-Meier plot and only p27 I vs. p27 I D groups. Statistical analysis was performed in comparisons of dexamethasone vs. corresponding pressure control groups in log-rank Test; p27 I: n = 7, p27 I D: n = 6.
