

**Supplemental Figure 2. Intrathecal injection of T0901317 21 days after spared nerve injury had no effect on the activation of microglia and astrocytes.**

A-F: The immunofluorescence images of GFAP and Iba1 1 hour or 2 hour after T0901317 treatment. G: The bar graph shows the summary data of GFAP or Iba1 positive area in the above groups (n = 5/group). SNI = spared nerve injury; GFAP = glial fibrillary acidic protein; Iba1 = ionized calcium binding adaptor molecule 1.
