

Supplemental Figure S4

Time-course change in gene expression in murine peritoneal macrophage stimulated with lipopolysaccharide. 3×10^5 cells/2mL/well of murine peritoneal macrophage-derived cell line RAW264.7 was stimulated with LPS (100ng/mL) for 0, 3, 12, and 24 hours and mRNA expression for both *I/6* (panel A) and *Socs3* (panel B) was evaluated with qPCR.

A. *I/6*

B. *Socs3*
