

**Supplemental Digital Content 1. Original and revised recruitment targets, and actual enrollment**

	<b>Unexposed</b>	<b>Singly exposed</b>	<b>Multiply exposed</b>	<b>Total</b>
<b>Original Targets</b>				
8-12 years	250	150	100	500
15-20 years	250	150	100	500
<i>Total</i>	500	300	200	1000
<b>Revised Targets</b>				
8-12 years	250	188	125	563
15-20 years	188	174	75	437
<i>Total</i>	438	362	200	1000
<b>Actual enrollment</b>				
8-12 years	224	200	130	554
15-20 years	187	180	77	444
<i>Total</i>	411	380	207	998

Years refer to age at testing. Original targets were based on preliminary estimate of available population (reference 27). Targets were revised at mid recruitment based on actual recruitment patterns and updated estimate of subjects available for recruitment (e.g., fewer older children available), with the goal of maintaining total numbers of multiply-exposed subjects, taking advantage of increased availability of singly-exposed children, and maintaining or improving originally-calculated statistical power. Note that one multiply-exposed child who was enrolled refused all testing.
