

Supplementary Figure 1. Dexmedetomidine concentrations versus time.

Dexmedetomidine concentrations in plasma (median) versus time of three groups (Group 1: 3- to 12-month-old children, Group 2: 13- to 23-month-old children, and Group 3: 24- to 36-month-old children) after administration at $2 \mu\text{g}\cdot\text{kg}^{-1}$ intranasally.
