

Supplemental Figure 2: Daily home opioid use and pain after hospital discharge. Opioid use (mg IV morphine equivalents) and pain (with activity, 0-100 visual analogue scale) were quantified for 30d postoperatively. (A) Opioid use (B) Pain. Each line is an individual participant. Subjects using no opioid or reporting no pain for 30d are shown as an open circle. Result are shown for controls (intraoperative short-duration opioid).
