

Supplementary Figure 6: Changes in Endpoint Parameters with Increased Levels of PEEP Compared With PEEP 5 during Hyperacute CS.

Data are mean \pm SEM. Bars represent relative changes in endpoint parameters during increasing levels of PEEP compared with PEEP 5 in Hyperacute Cardiogenic Shock. Abbreviations as described in Figure 4.

NS = Not significantly different vs. PEEP at 5 cmH₂O

* $P < 0.05$ vs. PEEP at 5 cmH₂O

† $P < 0.01$ vs. PEEP at 5 cmH₂O

‡ $P < 0.001$ vs. PEEP at 5 cmH₂O
