Supplementary Table S2. Randomised trials in normothermia included in literature review by guideline development groups for surgical site infection prevention recommendations											
Author (ref)	**Year**	**Included in guideline[¥‡]**						**Surgery**	**N total**	**SSI Outcome [ƒ]**	**Intervention(s)**
		ACS	**CDC**	**Ling**	**SHEA**	**WHO**	**NICE**				
Kurz (1)	1996	Y	Y	Y	Y	Y	Y	Colorectal	200	Primary	Maintenance of normothermia (heated intravenous fluids and forced-air warming)
Melling[§] (2)	2001	Y	Y	Y	Y	Y	N	General	421	Primary	Systemic warming - preoperative forced-air, warming blanket. Local warming - non-contact, radiant heat dressing to wound area
Wong (3)	2007	Y	Y	N	Y	N	N	Abdominal	103	Composite primary	Perioperative warming mattress
Pu (4)	2014	N	N	Y	N	N	N	Abdominal	110	Secondary	Underbody warming system
Lau (5)	2018	NA	NA	N	Y	NA	N	All Surgery	200	Secondary	Forced-air warming system

[¥] N= Not included, Y=included in the guideline. "NA" Trials published after 2014 were not available for inclusion in the WHO and CDC guidelines, trials published after 2017 were not available for inclusion in the ACS guidelines.
[‡] ACOG did not provide a recommendation, the Spanish Surgical Association not included in this table as the guideline authors based the recommendation on the CDC, WHO and NICE recommendation(6-11)
[ƒ] SSI [Surgical Site Infection] endpoints: trial include SSI as a primary outcome of interest, part of a composite primary outcome, or as a secondary outcome
[§] Melling et al (2) was a three-arm randomized controlled trial with patients assigned to standard care, or one of two warmed groups (systemic or local and systemic)
