Supplemental Figure 1

Supplemental Figure 2
Supplemental Figures 1-3. Kaplan Meier Curve analyzing survival rate (from cessation of ECMO) for subgroups veno-arterial ECMO (VA) versus veno-venous ECMO (VV), the underlying condition of primary graft dysfunction (PGD), non-transplant related cardiac surgery (CTS), non-surgical cardiogenic shock (CS) and non-surgical respiratory failure (RF) and of patients who had to undergo renal replacement therapy (RRT).
Supplemental Figure 4
Supplemental Figure 5
Supplemental Figures 4-6. SF-36 domain results for the whole cohort (ALL), veno-arterial ECMO (VA), veno-venous ECMO (VV), the underlying condition of primary graft dysfunction (PGD), non-transplant related cardiac surgery (CTS), non-surgical cardiogenic shock (CS) and non-surgical respiratory failure (RF). Subgroups of patients who had to undergo renal replacement therapy (RRT) or not are also displayed.
