Supplementary Figure 1: Overall survival (OS) of 43 patients with liver tumor (LM) of ovarian cancer. (A) OS of patients with LM of ovarian cancer according to the presence of oligometastasis (blue line) and nonoligometastasis (green line). (B) OS of patients with LM of ovarian cancer according to the maximum diameter of LM: ≤3 cm (blue line) and >3 cm (green line). (C) OS of patients with LM of ovarian cancer according to the treatment procedure: hepatectomy (blue line), radiofrequency ablation (RFA) (green line), and transarterial chemoembolization (TACE) (red line).

Figure 2: Treatment protocol of ovarian cancer patients with liver metastases. RFA: Radiofrequency ablation; TACE: Transarterial chemoembolization.
