

eFigure. Flowchart of the study and the number of responders at each timepoint

The study timeline indicates the relationship between the two on-study infusions (infusion icon); blood draws for NfL and OCR ('blood drop' icon prior to the second infusion and at study close-out visit); and questionnaires (computer icon). The number of patients at each study timepoint is shown below. During the patient recruitment period, 130 eligible patients agreed to participate and signed consent (while 3 declined); however, only 111 completed the first questionnaire (week 4). The numbers of patients who completed the questionnaires at each timepoint are shown under the respective visits.
