

Supplementary Figure 3. Scatter plots show similarity in estimates of log2 fold change from comparisons of expression levels between each treatment versus baseline and from testing for treatment-specific with models that incorporate data from all three collections. A) Log2 fold change estimated from a comparison of placebo/nab-paclitaxel versus baseline (y-axis) is compared to log2 fold change from a comparison of expression in mifepristone/nab-paclitaxel and placebo/nab-paclitaxel versus baseline. B) Log2 fold change estimated from a comparison of mifepristone/nab-paclitaxel versus baseline (y-axis) is compared to log2 fold change from a comparison of expression in mifepristone/nab-paclitaxel versus placebo/nab-paclitaxel and baseline.
