

ATTENTION PROVIDER:

1-2 hours after administration of initial HF medications, return to the "ED HF Clinical Decision" menu and select option "Step 3: Clinical Decision Guide: MD Re-evaluation".

EVALUATION OF HF SYMPTOMS

Done

It has been 1-2 hours since the initial heart failure treatment.
Are the patient's symptoms improving, and is there increased urine output? (eg. 1L over 1 hr, or output >500ml in 1hr if Cr Cl >2.5)

Yes

No

HF DC FROM ED CRITERIA

Done

Based upon your selection, it appears that the patient's symptoms are improving. Does the patient meet the following discharge criteria?

- heart rate <100
- SBP >90
- urine output >1 liter
- cardiac markers negative
- no chest pain
- no new arrhythmias
- electrolytes within normal range
- social support available

Yes

No
