

Supplemental Digital Content 3. Showing the results of further logistic regression analysis was performed on the parameters with statistically significant differences between the enterovirus (EV) and human parechovirus (HPeV)-infected children.

	Enterovirus (EV)	Human parechovirus (HPeV)	p-value
Abnormal WCC (normal: 6.0 - 17.0)	20% (26/127)	56% (18/32)	<0.001
above higher limit	6%	0%	
below lower limit	14%	56%	
Abnormal neutrophils (normal: 1.50 - 8.50)	21% (27/126)	9% (3/32)	0.138
above higher limit	18%	6%	
below lower limit	3%	3%	
Abnormal lymphocytes (normal: 4.00 - 13.50)	39% (49/126)	91% (29/32)	<0.001
above higher limit	0%	0%	
below lower limit	39%	91%	
Abnormal CSF WCC (normal: 0-20)	50% (64/129)	6% (2/31)	<0.001
