

Is Superior Capsule Reconstruction a Feasible Option for Long-Term Recovery of Patients with Rotator Cuff Tears?

Patients with irreparable rotator cuff tears who underwent arthroscopic SCR (n=30)

1- and 5-year postoperative follow-ups

Functional outcomes

Radiological results

SCR is a viable surgical option for restoring shoulder function in patients with irreparable rotator cuff tears, especially in those who take part in physical work or sports

Five-Year Follow-up of Arthroscopic Superior Capsule Reconstruction for Irreparable Rotator Cuff Tears
