**Supplemental FIGURE 1.** Forest plots of odds ratios (95% CI) for probability of HAM-D$_{17}$ response at week 8 (LOCF) in those with early improvement[*] versus those without early improvement, based on logistic regression analysis.

CI indicates confidence interval; HAM-D$_{17}$, 17-item Hamilton Rating Scale for Depression; LOCF, last observation carried forward.
Response defined as ≥50% reduction in HAM-D$_{17}$ total score at week 8/LOCF.
[*]Early improvement defined as a reduction in HAM-D$_{17}$ total score of ≥20% at week 2.
