

Supplemental FIGURE 2. Kaplan-Meier curves of time to HAM-D₁₇ response for patients with early improvement compared with patients without early improvement; pooled analysis. N by time point is listed above the x-axis in each plot. Early improvement was defined as a reduction in HAM-D₁₇ total score of $\geq 20\%$ at week 2; response was defined as $\geq 50\%$ reduction in HAM-D₁₇ total score at week 8/LOCF.

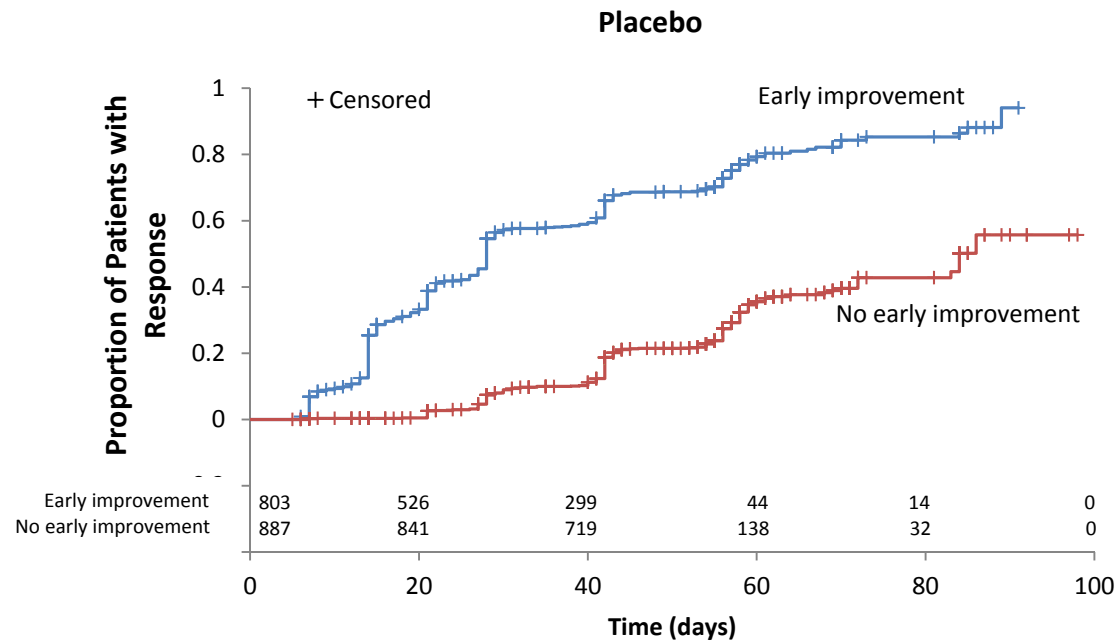

A. Desvenlafaxine 50 mg/d

B. Desvenlafaxine 100 mg/d

C. Placebo

HAM-D₁₇, 17-item Hamilton Rating Scale for Depression.
