Is Exempting Preventive Medication from Health Plan Deductibles Beneficial for Patients with Diabetes?

Changes in monthly and annual outcomes

Transition to PDL coverage resulted in:

Decrease of \$612 per member per year in OOP medication expenditures

Increases in medication use of 6.0 30-day refills per person during the year

More than two fold greater increase in refills for lower-income patients than higher-income patients

PDLs cover important classes of medication to manage diabetes related comorbidities, and result in substantial OOP savings and increased adherence to medications for patients with diabetes, especially those with lower incomes

Reduced Cost-Sharing for Preventive Drugs Preferentially Benefits Low-Income Patients with Diabetes in High Deductible Health Plans with Health Savings Accounts Ross-Degnan et al. (2020) | *Medical Care* | DOI:10.1097/MLR.000000000001295
