

6 and 12 Month Outcomes After Enteral Nutrition Induction in Pediatric Crohn's Disease

Enteral nutrition (EN) as a dietary therapy is known to induce remission in pediatric Crohn's disease (CD)

However, long-term clinical outcomes related to remission maintenance after EN induction in CD are less clear

Retrospective chart review

Maintenance therapy at 12 months after EN induction

Patients with Crohn's disease who use enteral nutrition as induction and maintenance therapy frequently require alternative therapies
