

Supplementary Figure 1

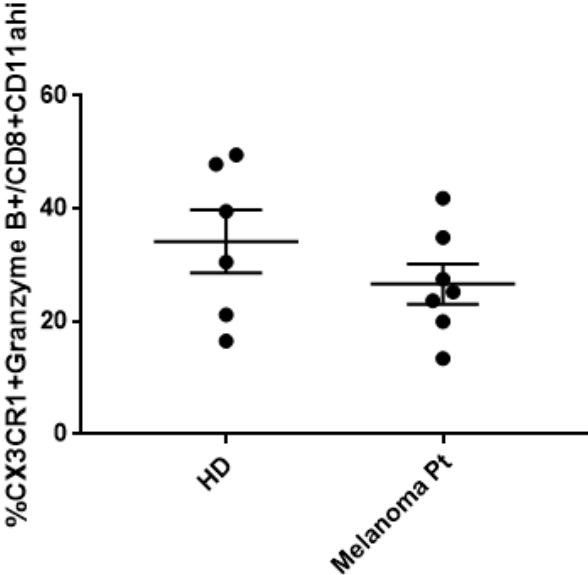

Figure S1. Comparison of CX3CR1+CD8+ T cells in healthy donors vs. metastatic melanoma patients. Percentage of CX3CR1+ Granzyme B+ cells in CD11a^{high} CD8+ T cell population isolated from the peripheral blood of patients with melanoma (n=7) and healthy donors (n=6). There is no significant difference in CX3CR1+CD8+ T cells frequency between melanoma patients and healthy donors. The data were shown as mean \pm SEM (unpaired t test).
