

**Fig. S1. Expression of MHC class II antigens, CIITA, and CD74 in human melanoma xenografts treated systemically with anle138b.**

Heatmap of MHC class II proteins of the HLA-DP, HLA-DM, HLA-DR isotypes, the MHC class II transactivator (CIITA), and the invariant chain protein CD74 identified by RNA-seq (transcriptomics) and/or MS-based proteomics of the anle138b-treated WM983-B human melanoma xenografts.
