**SDC 6. Myogenin.** Myogenin positive cells counted on cross sections of muscle biopsies from all time points from elderly men receiving either losartan or placebo. 

*Panel A:* Microscope images showing myogenin immunohistochemistry. Fibre borders, nuclei and myogenin cells are stained red, blue and turquoise, respectively. Scale bar, 100 µm.

*Panel B:* The table represents the total number (n) and percentage (%) of biopsies containing one or more myogenin positive cells at each time point. Losartan, N=12, placebo, N=13.
