

Supplementary Table 3. Time Varying Analysis for FO users

Mobility Outcomes	Incident Rate		Model 1 ^a		Model 2 ^a	
	FO Users	Nonusers	HR (95% CI)	P-value	HR (95% CI)	P-value
Incident MMD	12.6	15.8	0.77 (0.63, 0.95)	0.012	0.78 (0.64, 0.96)	0.019
Persistent MMD	6.3	8.2	0.78 (0.59, 1.03)	0.082	0.79 (0.60, 1.05)	0.101

Model 1 included intervention arm and age. Model 2 included Model 1 plus race, body mass index (BMI), college education, history of cardiovascular disease, chronic pulmonary disease, diabetes, social support, and 3MSE score. Clinical site and gender were used as stratifying factors.
