

Supplementary Table 4. Sensitivity analysis with Multivitamin/Vitamin C use as a covariate in Model 2

Mobility Outcomes	Incident Rate		Model 1 ^a		Model 2 ^a	
	FO Users	Nonusers	HR (95% CI)	P-value	HR (95% CI)	P-value
Incident MMD	12.6	15.8	0.77 (0.63, 0.95)	0.012	0.80 (0.65, 0.99)	0.04
Persistent MMD	6.3	8.2	0.78 (0.59, 1.03)	0.08	0.82 (0.62, 1.09)	0.17

^aModel 1 included intervention arm and age. Model 2 included Model 1 plus race, body mass index (BMI), college education, history of cardiovascular disease, chronic pulmonary disease, diabetes, social support, 3MSE score, & multivitamin/Vit. C use.

Clinical site and gender were used as stratifying factors.
