

Figure e-4. Correlation between Ig classes

The correlation between Ig classes was evaluated. IgG levels strongly correlate with IgA (panel A. Pearson correlation;  $p < 0.0001$ ;  $r = 0.51$ ) and IgM concentrations (panel B. Pearson correlation;  $p < 0.0001$ ;  $r = 0.49$ ). IgA and IgM values (panel C) were weakly correlated (Pearson correlation;  $p < 0.0001$ ;  $r = 0.34$ ).
