

Table e-2. Sample-based quality control

Summary of sample-based quality control steps of genotyped data. 34 patients with anti-NMDAR encephalitis and 629 healthy controls had to be excluded based on quality control procedures and control matching.

	Cases	Controls	Total
Samples started with	212	1,219	1,431
Number of excluded samples			
Genotyping not successful	0	NA	0
Sample call rate < 85%	3	0	3
Sample Call rate < 98% or heterozygosity Rate > 3xSD	13	3	16
Cryptic relatedness > third degree relatives	5	13	18
Missing or discrepant sex	5	0	5
Population Outlier	8	0	8
Control matching	-	613	613
Total samples analyzed	178	590	768
