**Class I Elastics**

- **Vector:** Neutral
- **Orthodontic indication:** Class I malocclusion
- **Protocol indications:**
  - Placed contralateral to injury in protocol phases I and II for unilateral condylar fractures to limit degree of opening.
  - Placed bilaterally in protocol phase III.

**Class II Elastics**

- **Vector:** Anterosuperior force vector to mandible
- **Orthodontic indication:** Class II malocclusion
- **Protocol indications:**
  - Placed ipsilateral to injury in protocol phases I and II for unilateral condylar fractures to traction fracture segments out to length.
  - Placed bilaterally in protocol phases I and II for bilateral fractures.

**Class III Elastics**

- **Vector:** Posterosuperior force vector to mandible
- **Orthodontic indication:** Class III malocclusion
- **Protocol indications:**
  - Placed contralateral to injury in protocol phases I and II for unilateral condylar fractures if significant displacement is present.
