Supplementary Figure 1: Longitudinal CD4+ T-cell and HIV Viral Load at weeks 00, 04, 12 and 24 of cART commencement.

Red (C-IRIS) and black (no-ND). * denotes \(p < 0.05\). CD4+ T-cell count at W00 and W04 were significantly lower in the C-IRIS group compared to the no-ND group \((p\text{-value}=0.015\) and 0.042 respectively). No significant difference in HIV viral load was demonstrated between groups.
