

**Figure S-1.** *P-gp, BCRP and MRP1 fluorescence-minus-one (FMO) controls in testicular T-cell subsets. P-gp, BCRP, and MRP1 in matched CD4+(A) and CD8+(B) testicular T-cells from an uninfected donor. Expression of P-gp (left, PerCP channel), BCRP (middle, PE channel) and MRP1 (right, APC channel) in PBMC phenotypes. Blue peaks represent FMO controls while red peaks represent positive stains.*
