

Supplemental Figure 1

**Figure S1: IRF3 is activated in WT macrophages treated with commensal bacteria and genomic DNA + Lipofectamine 2000 in vitro.** Thioglycollate-elicited macrophages were cultured for 2h with sonicated commensal bacteria, derived from the mouse cecum, or 1ug DNA + Lipofectamine 2000. Serine396 phosphorylated IRF3 (P-IRF3), total IRF3, and GAPDH were measured via western blot.
