

Effects of oxygen treatment and butoxamine on breathing in mice during oxygen inhalation.

The arterial pH value (**A**), PO₂ (**B**), and PCO₂ (**C**) were measured at the end of oxygen treatment.

The grouping methods and experimental protocols were the same as Fig. 1. The values are expressed as mean±SEM (n = 6 for each group). * $P < 0.05$ vs. NS+Air group; † $P < 0.05$ vs.

ZY+Air group. NS: normal saline; ZY: zymosan; Oxy: oxygen; BUT: butoxamine.
