

Figure S1. Calculated GFR (MDRD) (mL/min/1.73m²) over time by treatment group (ITT population – 24-month analysis). At each visit boxplots are displayed, with the means joined by a solid or broken line. The whiskers are shown at the 10th and 90th percentiles. GFR: glomerular filtration rate; ITT: intention to treat; MDRD: Modification of Diet in Renal Disease (formula).
