FIGURE S1. Liraglutide has no influence on recipient T cell activation and Treg cell induction. Splenocytes were harvested from recipients 2 weeks after transplantation and stained with fluorochrome-labeled monoclonal antibodies. (A) and (C) Flow cytometry analysis of CD4+ effector/memory T cells (CD4+ CD44^{high} CD62L^{low} T cells) and Tregs (CD4+ CD25^{+} Foxp3^{+} T cells) frequency (n = 3 per group). (B) and (D) The frequencies of IFN-γ, IL-17–producing CD4+ T cells were determined by flow cytometry (n = 3 per group). Data are expressed as the mean ± SEM. ns indicates no significance.
