

Outcomes of renal transplant recipients with SARS-CoV-2 infection in the eye of the storm: A comparative study with waitlisted patients

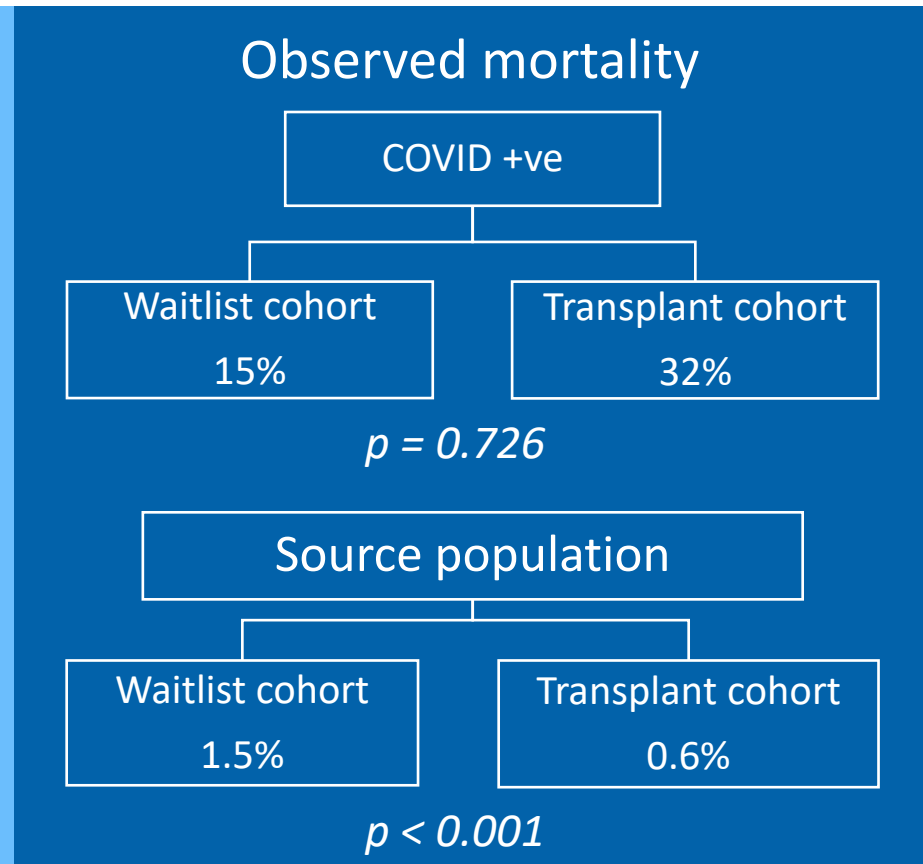

32 patients infected
(9.9% of total waitlisted cohort)

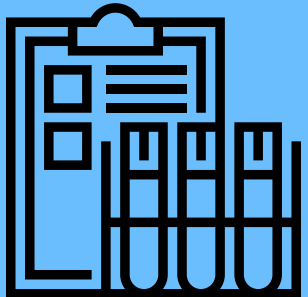

28 patients infected
(1.9% of total transplant cohort)

P < 0.001

Mortality predictors

- CRP at 48 hours
- Peak CRP
- qSOFA at 48 hours

Conclusion: Significantly higher incidence in the waitlisted population with very high mortality in both cohorts. Shielding effective in protecting patients.
