

Impact of Sarcopenia on Simultaneous Pancreas and Kidney Transplantation Outcomes: A Retrospective Observational Cohort Study

Simultaneous Pancreas and Kidney candidates

Is pretransplant sarcopenia a risk factor for graft loss?

Measure of the psoas muscle mass index in 107 recipients of a simultaneous pancreas and kidney transplant

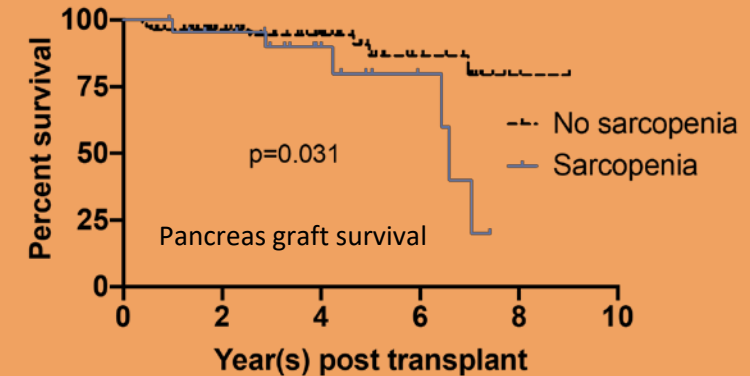

Graft survival assessment

Sarcopenia was associated with:

↓ Pancreas graft survival

↔ Kidney graft survival

+ Patients who reversed sarcopenia had less graft loss
