

# Largest Experience of Safety and Efficacy of Patiromer in Solid Organ Transplant

## Methods

Single-center  
Retrospective case series

Solid organ transplant  
recipients (n=36)

Received patiromer for  
hyperkalemia for at  
least 4 weeks

## Results

Moderate reduction in  
mean K<sup>+</sup> levels

Baseline

5.4mmol/L

4 weeks

5.0mmol/L

Minimal change in mean  
calcineurin inhibitor levels

Tacrolimus (troughs)

6.9ng/mL

8.3ng/mL

Cyclosporine (C2 levels)

456ng/mL

423ng/mL

Low gastrointestinal  
adverse effects

11% started  
magnesium  
supplement

11% elevated  
calcium levels
