## Largest Experience of Safety and Efficacy of Patiromer in Solid Organ Transplant

### Methods
- Single-center Retrospective case series
- Solid organ transplant recipients (n=36)
  - Received patiromer for hyperkalemia for at least 4 weeks

### Results
- **K**
  - Moderate reduction in mean K+ levels
  - Baseline: 5.4mmol/L → 4 weeks: 5.0mmol/L

- **Minimal change in mean calcineurin inhibitor levels**
  - Tacrolimus (troughs)
    - Baseline: 6.9ng/mL → 4 weeks: 8.3ng/mL
  - Cyclosporine (C2 levels)
    - Baseline: 456ng/mL → 4 weeks: 423ng/mL

- **Gastrointestinal adverse effects**
  - 11% started magnesium supplement
  - 11% elevated calcium levels
