

Figure e-1: 6 MWT individual participants response per treatment group at baseline, 5 and 7 days.

Distance walked during the 6MWT is represented for every participant who participated in the trial. For each participant, three time points are represented: the baseline distance walked, distance walked after 5 days of treatment and the distance walked at day 7 which is 2 days after the end of treatment. Panel 2A represents the lowest treatment group with dosing at the end of treatment. Panel 2A represents the lowest treatment group with dosing at 0.01mg/kg/hr. Panel 2B shows treatment with the intermediate dose of 0.10 mg/kg/hr. Panel 2C shows participants who received the highest dose of elamipretide at 0.25 mg/kg/hr. Finally, panel 2D shows all participants who received placebo.
